

This I get from a StartdLog from the JobAD

```
LigoSearchTag = "ligo.prod.o3.burst.paramest.bayeswave"
```

```
LigoSearchUser = "katerina.chatziioannou"
```

```
UserLog =
```

```
"/home/katerina.chatziioannou/BayesWave_dev/AmplitudePrior/Peak4/logs/BayesWavePost_trigtime_1243531815.461905003_0.0_0.0_17-18954161-0.log"
```

```
x509userproxy = "/home/katerina.chatziioannou/BayesWave_dev/AmplitudePrior/Peak4/x509up_u44299"
```

```
x509UserProxyExpiration = 1591774653
```

```
x509userproxysubject = "/DC=org/DC=cilogon/C=US/O=LIGO/CN=Katerina Chatziioannou"
```

```
katerina.chatziioannou@ligo.org
```

So as a rule of thumb any line that includes User should be anonymized. There are also these lines: However there are exceptions like:

RemoteUserCpu

```
06/03/20 08:26:03 (pid:45426) slot1_1: Request accepted.
```

```
06/03/20 08:26:03 (pid:45426) slot1_1: Remote owner is katerina.chatziioannou@ligo
```

```
06/03/20 08:26:03 (pid:45426) slot1_1: State change: claiming protocol successful
```

```
06/03/20 08:26:03 (pid:45426) slot1_1: Changing state: Owner -> Claimed
```

```
06/03/20 08:26:05 (pid:45426) GLEXEC_STARTER is false, cancelling delegation
```

```
06/03/20 08:26:06 (pid:45426) slot1_1: Got activate_claim request from shadow (131.215.11)
```

But I do not think they are as important

For the rest I would say that is the really only important stuff

I would say that remove all the occurrences of "user" is excessive but there are some good suggestions on classads that should be redacted.
